

$U(w)$: expected sensing usage per episode

(schematic units)

Active inference minimizes

$G(\pi) = \text{pragmatic} + \text{epistemic}$

is exactly maximizing $R(s,a) + w \cdot I(b,a)$ at $w = 1$

(Prop. 1, exact under log scoring)

w_{lo}

w_{hi}

- $U(w)$: schematic usage curve
- stated sensing budget B
- shadow price $w^*(B) = (w_{lo}, w_{hi}]$
- $w = 1$ (EFE)

Information weight w (log scale)
